DETAILED ACTION

1. This office action is responsive to application filed on 08/28/2003. Claims 1-31 are pending in this office action.

Claim objections

Claim 1, the term "selectively and logically linking first and second package files of the plurality of package files by correlating respective reference connections of each of the first and second package files" especially in "selectively and logically linking first and second package files" and "correlating"; and

Claim 30, the term " a signal bearing medium bearing the first program" are unclear to what applicants intend to mean. Clarification or correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

- (e) the invention was described in-
 - (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
 - (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1-13,15-28, 30-31 are rejected under 35 U.S.C. 102(e) as being unpatentable over Lin et al. Pub. No. 20030222872.

Regarding claim 1: Lin teaches a method comprising:

receiving a plurality of package files, wherein each package file is descriptive of a portion of the electrical design and defines a reference connection (paragraph [0006]);
selectively and logically linking first and second package files of the plurality of

package files by correlating respective reference connections of each of the first and second package files (paragraph [0006]); and

processing the logically linked first and second package files to determine a performance characteristic of the electrical design (paragraph [0068]).

Regarding claim 2: Lin teaches a method with modification (paragraph [0044]).

Regarding claim 3: Lin teaches a method with linking instruction (paragraphs [0006]& [0043]).

Regarding claim 4: Lin teaches a method with data (paragraph [0004]).

Regarding claim 5: Lin teaches a method with storing (paragraph [0069]).

Regarding claim 9: Lin teaches a method with pin, point electrical references (paragraph [0005]).

The remaining claims of 102(e) section contain features similar to the rejection of claims 1-4,5 or 9 and rejected in the rationale.

Claim Rejections - 35 USC § 103

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 103 that form the basis for the rejections under this section made in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Regarding claims 14,29: Lin does not teach simulation. Spaanenburg teaches this feature at column 1, lines 40-58.

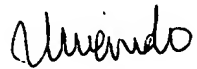

It would have been obvious to one of ordinary skill in the integrated circuit design art at the time of the invention to have combined the teaching of Spaanenburg into Lin to simulation as taught by Spaanenburg would have provided a faster method in data circuit generation.
